## A Completely Integrated EDI Solution for Microsoft Dynamics<sup>®</sup>

An "All-In-One" EDI Solution from Data Masons Makes it Simple and Cost-Effective to Integrate EDI with Microsoft Dynamics

Vantage Point EDI for Microsoft Dynamics provides a complete EDI processing platform that enables Dynamics users to achieve EDI integration and compliance in an efficient and cost-effective manner. Vantage Point is a finished solution with powerful data transformation tools – not just a tool to build a solution, like many alternative products.

Vantage Point includes everything a company needs for EDI compliance with virtually any trading partner, without third-party tools such as translators, mapping tools and labeling systems. Compliance is managed by Data Masons with an all-in-one approach that allows for easy implementation, efficient operation, ongoing managed compliance and premium support.

Vantage Point provides communication components to connect to a VAN mailbox or directly to trading partners. It also includes a built-in translator, ASN packing system, EDI document management, UCC-128 label print engine, data entry templates for turnaround documents and business connectors for Microsoft Dynamics.

Built on Microsoft SQL Server using the latest .NET development tools, Vantage Point is a scalable, multi-user solution that will handle enterprise-level EDI requirements. All inbound and outbound documents are stored in SQL in raw EDI format, structured data tables and XML (within SQL) which provides virtually unlimited options to access and leverage critical EDI data. Its design enables powerful EDI integration and compliance without modifications to the Microsoft Dynamics ERP solution.

Vantage Point EDI provides extensive EDI functionality such as a native ASN solution, third-party warehouse EDI integration and solutions that enable e-business integration with customers and suppliers, thus enabling automation of the entire supply chain.

Vantage Point offers numerous industry firsts, such as the EDI Information Center<sup>™</sup>, automated processing, email client for alerts, pre- and post-processing trigger systems and an Adobe<sup>®</sup> Flash interface that makes the system user-friendly and highly functional.

### BENEFITS FOR VANTAGE POINT EDI USERS

- Scalable and multi-user access provide enterprise-level EDI performance
- Enables EDI users to run EDI without transaction fees
- Advanced SAC allowance handling
- Partner-specific error trapping helps reduce compliance errors and fines
- Trading partner kits can be purchased and installed in minutes via the Web
- Easy to learn and use with a graphical workflow interface and alerts system
- Key documents are stored in XML and SQL tables, enabling powerful EDI data access
