The Vantage Point Business Network

An Advanced Business Processing Platform Designed for Supply Chain Automation

Data Masons' Business Network (XBN) is a powerful communications platform built on the latest Microsoft[®] technologies that enables a company's customers, suppliers and affiliates to deliver and receive EDI, XML, PDF, HTML, fax, ASCII and virtually any data format transaction electronically.

XBN provides secure electronic "mailboxes" for customers and suppliers to deliver and receive transactions securely via the Internet and intranet. XBN provides each supplier and customer a separate location for their transactions so the transactions are reliably and securely exchanged and acknowledged. XBN employs a powerful security schema that prevents unauthorized access and decryption of business data.

XBN is a cost-effective platform that requires only a modestly equipped computer and an Internet connection.

XBN provides companies with the means to affordably automate the entire supply chain.

Please note: Customers that require a VAN service may still require the use of a VAN mailbox interconnect.

BENEFITS FOR VANTAGE POINT EDI USERS

- Fully automate the supply chain with almost any business document data format
- Modest hardware investment and Internet bandwidth requirements
- Very low-cost maintenance and operation
- Fully supports Vantage Point EDI Supply Chain Edition and virtually any other e-commerce application
