EDI WORKFLOW SCHEDULER

BENEFITS FOR EDI WORKFLOW SCHEDULER USERS

- Save money and time by eliminating user involvement in EDI processes
- Eliminate the need for user intervention by automating all critical tasks
- Respond quickly to failed processes or documents via automated email alerts
- Quickly and easily set up and maintain schedules as business needs require
- Ensure that processes always run in a specific sequence
- Improve overall system performance and balance system load during off hours

End-to-End Automation of Key EDI Processes

EDI Workflow Scheduler takes Vantage Point EDI to a whole new level of value and automation. Extending the value of Data Masons’ complete EDI processing platform, EDI Workflow Scheduler enables end-to-end automation of key EDI processes without any user intervention required.

In addition to the business benefits automation introduces, EDI Workflow Scheduler utilizes the latest three-tier technology platform designed to deliver improved system performance for all users.

EDI Workflow Scheduler features include:

- The ability to schedule key EDI processes such as network send/receive, accounting integration, data extraction from accounting and sending of documents to partners
- Enables linked tasks such as “receive from network then send to accounting”
- Automated error alerts when documents fail and self-monitoring capability alerts
- A three-tier platform design that enables processes to execute without client-side processing or accessing the Vantage Point Client
- Manages the execution of processes, including simultaneous processes that could cause conflicts
- Define virtually any type of frequency for scheduled tasks
- Graphics-based scheduling tool allows for the fast setup of routines and the ability to copy and modify predefined scheduled tasks
- Runs as a service on any workstation or server and does not require Vantage Point EDI to be open and running
